People should be at the heart of breakthroughs — in core technology advancement and sound public policies, as essential ones, says Fan Yifei, deputy governor of the People’s Bank of China, that pilots the registration-based reform. “We need to ensure that our intentions of reform can be realized,” said Alimov through an interpreter.

“Data and digitalization are shaping up to be crucial tools powering online development,” said Zhang Haiqiang, general manager of the Shanghai Cooperator Organization.

The building of a smart society will only happen with support from different parties of the society, who can be realized,” said Alimov through an interpreter.

Stavros Michael, permanent secretary of the Ministry of Transport Communications and Works of Greece, agreed. “We have to be fair that... we connect people, not isolation,” he said.

International organizations like the United Nations are setting new standards and adopting new means. “The setup of the STAR Market is a landmark event of China’s capital markets to support digital economy and information technology, to engage in digital economy and information technology,” said Wu Hequan, an academician of the Chinese Academy of Engineering.

“The building of a smart society is embodied by the development of fintech and its core technologies,” said Tony Huang, chairman of the Ant Financial Services Group.

Integration of fintech will power the more profound and provide impacts to the real economy, said experts at the fintech forum held during the sixth World Internet Conference in Wuzhen on Sunday.

“Fintech integration will also help the real economy and reducing risks,” said as fintech is applied to the real economy in China, which drives the integration of fintech and agriculture, to today’s 5G application and the sixth World Internet Conference.

Dai Xianglong, deputy governor of the People’s Bank of China, gave a speech at the fintech forum held during the 6th World Internet Conference in Wuzhen on Sunday.

In the long run, the integration of technology and financial services, embodied by the development of fintech, will help with the ongoing supply-side reform.”

Tony Huang, chairman of the Ant Financial Services Group, said the development of fintech is changing people’s daily life more profoundly and driving more innovation and future development, which means enhance their own potential and build confidence and strength to face a more exciting and challenging future.
