The rapid development of the internet has brought more opportunities and challenges. Governments, businesses, and organizations from countries around the world are using the internet to promote economic development, enhance social governance, and fight against threats. At the sixth World Internet Conference in Wuzhen, Zhejiang province, on Monday, President Xi Jinping called for advocating and practicing sovereignty in cyberspace.

In an insecure, every new connection is a new threat. In a secure world, every new connection is a new opportunity,” said Gay Diederich, global innovation officer for Cisco.

Gay Diederich, global innovation officer for Cisco, said at the forum that "cyberspace is a team sport" and "it's time for countries to work together to increase the compatibility of cybersecurity norms and rules for more effective cybersecurity worldwide.

Diederich said that cybersecurity is a new threat. In a secure world, every new connection is a new opportunity.”

Integrated future lies with ‘digital natives’

Governments, businesses and organizations from countries around the world are using the internet to promote economic development, enhance social governance, and fight against threats. At the sixth World Internet Conference in Wuzhen, Zhejiang province, on Monday, President Xi Jinping called for advocating and practicing sovereignty in cyberspace.

Future of internet is defined by ‘digital natives’

As digital natives, young people around the globe should be properly guided to make contributions to the development of cyberculture and online cultural exchanges, senior government officials and experts said on Monday.

Sheng Qiongtao, vice-minister of the Cybersecurity Administration of China, noted that young people are the main force of building and developing the internet, and that they are well equipped with the knowledge and skills to make their own contributions.

Young people may have a different understanding of things. For example, they are more prone to sharing information on social media, and that is why we need to guide them in the right direction,” he said.

Young people are the future and the media — should join hands to come up with polices that will identify what is true or false, the media can help make such policies,” he added.

Industrial experts urged around the world to make a greater concerted effort to tackle the global challenge of safeguarding cyberspace.

"As a result, we should create new cyberculture that embodies the revitalization of human civilization, push for innovation in creating new content, equip young people with the ability to protect themselves from harmful content and build international standards to protect young people in cyberspace," Sheng said.

Li Qingsong, secretary of the Secretariat of the Communist Youth League of China, said young people should constantly be influenced by cyberculture, because the whole society should provide a healthy, safe, green, and positive cyberworld.

Cyberculture around the world should work together to promote exchanges between young people in different countries, he said.

"Young people are the future of society, and the development of cyberculture requires them to shoulder their responsibility to come up with new technologies, bridge the digital divide, enrich online content and promote cultural exchanges," Li said.

Edward Pilou, secretary-general of the World Assembly of Youth, said that people are talking about the Internet and cyberculture, they are talking about the most important generation — the younger generation. They make up 30 percent of online users, innovators, idea makers and information sharing who make up the digital environment.

Dennis A. B. Smith, former head of the Office of the High-Level Advisory Group at the World Bank, said that through its openness, the internet has empowered girls and women around the world.

"Today, gender equality is not only a platform to share knowledge, skills, and opportunities, but also a useful tool to address violence and internet anonymity," he said.

"Gender equality must be a priority of the media and we should join hands to come up with policies that will identify what is true or false, the media can help make such policies," he added.

Governments, businesses and organizations from countries around the world are using the internet to promote economic development, enhance social governance, and fight against threats. At the sixth World Internet Conference in Wuzhen, Zhejiang province, on Monday, President Xi Jinping called for advocating and practicing sovereignty in cyberspace.

"We should seize the opportunities presented by the Internet, especially the information revolution to accelerate urbanization, realize the establishment of a new type of information communication pattern," Li said.

"The information revolution and explain mass information require a new way of thinking and a drastic increase in the importance of the development of cybersecurity,” he said.

"As a result, we should create new cyberculture that embodies the revitalization of human civilization, push for innovation in creating new content, equip young people with the ability to protect themselves from harmful content and build international standards to protect young people in cyberspace," Sheng said.
