The digital economy is an increasingly important driver of global economic growth…

For centuries, the ancient Silk Road has connected East and West. In this technique and economic development, people-to-people ties are also a key element.

The International Cooperation along the Digital Silk Road Forum was held on Thursday during the Fifth World Internet Conference in Wuzhen, East China’s Zhejiang province, with Chinese government officials, overseas diplomats and business leaders exploring how to use the internet to improve governance and public services more effectively.

The National Development and Reform Commission said that China will strengthen cooperation to explore new technological solutions and to accelerate digital transformation, so that rapid technological advancements can benefit people in countries involved in the Digital Silk Road.

For China, the International Cooperation along the Digital Silk Road Forum is the latest in a series of efforts to promote cooperation in the three aspects, said Chen Zebing, vice-minister of industry and information technology. The Digital Silk Road will strengthen cooperation to explore new technological solutions and to accelerate digital transformation, so that rapid technological advancements can benefit people in countries involved in the Digital Silk Road.

Chen said the Digital Silk Road will make digital data sharing more efficient, for the nation’s more convenient, transparent and accessible public services.

The survey found that all major cities and regions in the world have already been incorporated into the network by the end of 2022. According to Ren, a total of 70 major city governments and 25 cities and regions had been already incorporated into the network by the end of October. More than 1,000 data-sharing interfaces are now in operation.
